Four-aircraft surface-field reconstruction: truth, predictions, and localized errors

	Input surface mesh	Ground truth	Transolver-Tiny prediction	Transolver-Tiny |error|	RAPTOR prediction	RAPTOR |error|
J-20			MSE = 0.763		MSE = 0.715 (+6.3%)	
P180			MSE = 0.188		MSE = 0.201 (-7.1%)	
Boeing 737			MSE = 1.386		MSE = 1.150 (+17.0%)	
ERJ			MSE = 0.120		MSE = 0.110 (+8.3%)	

−0.6 −0.4 −0.2 0.0 0.2 0.4 0.6

Surface-field value (one scale across all aircraft)

0.000 0.159 0.318 0.477 0.636

Absolute error (one power scale; 97.5th-percentile cap)

Continuous original triangle surfaces; predictions interpolated from the identical 4,096-point seed-42 protocol. Positive percentages favor RAPTOR; P180 is retained as a negative case.
