Reynolds-number extrapolation | aggregate-matched representative test case #27

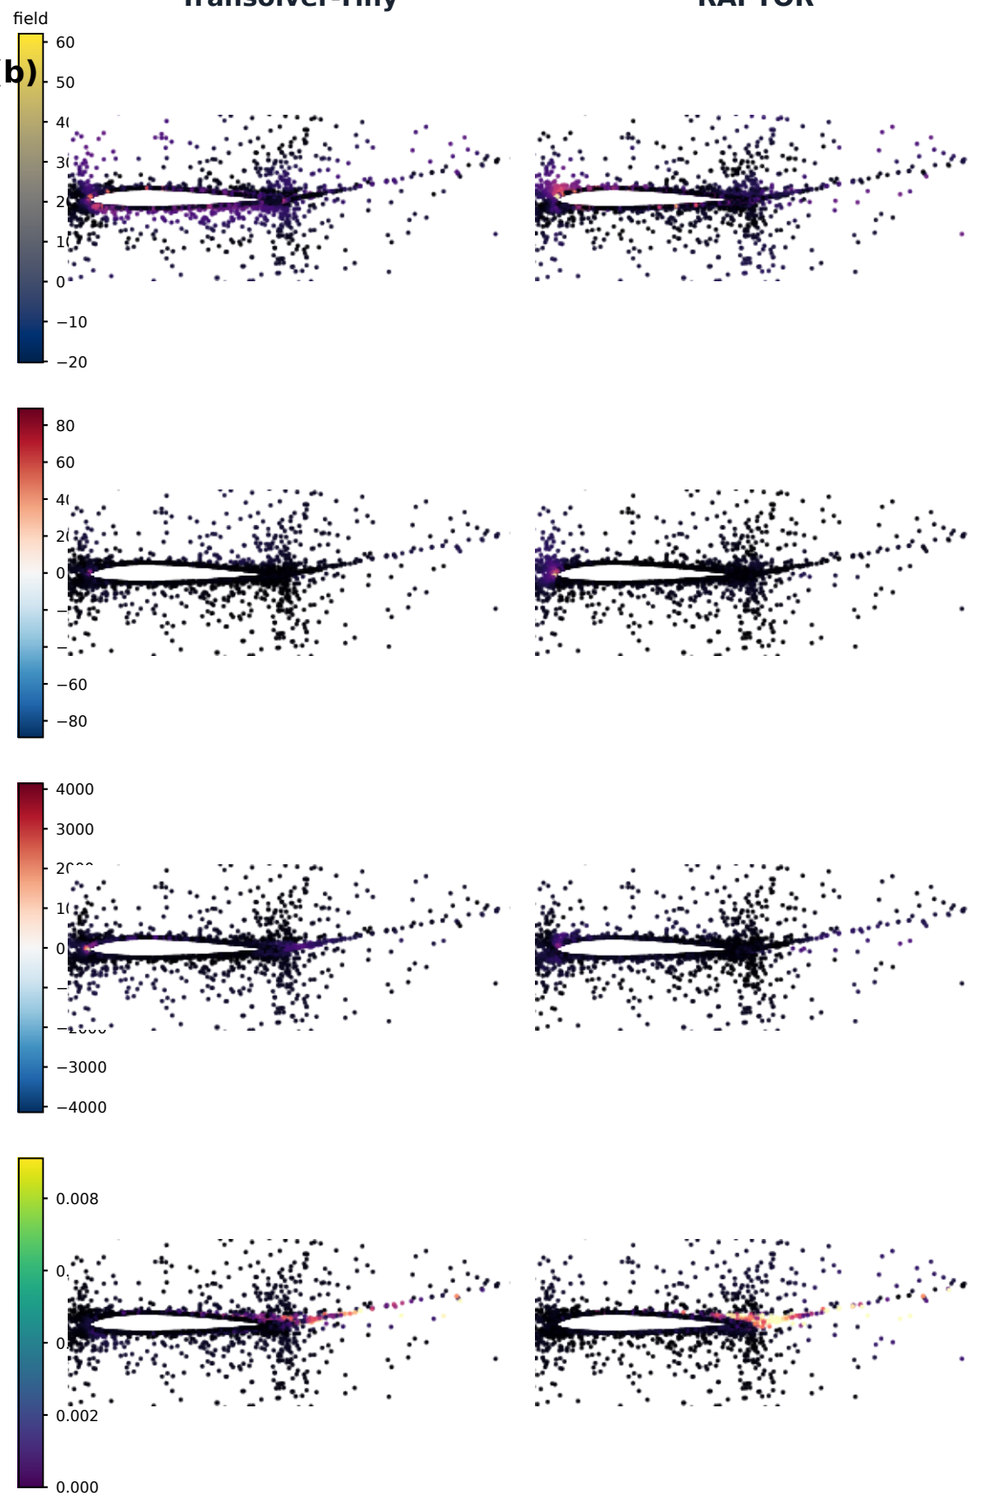

Physical fields · shared truth scale

Normalized absolute error · shared model scale

(a)

(b)

	Ground truth	Transolver-Tiny	RAPTOR	Transolver-Tiny	RAPTOR
u_x		rel. L_2 = 0.168	**rel. L_2 = 0.169**		
u_y		rel. L_2 = 0.205	**rel. L_2 = 0.276**		
p		rel. L_2 = 0.344	**rel. L_2 = 0.182**		
ν_t		rel. L_2 = 0.164	**rel. L_2 = 0.230**		

Each prediction uses the same color scale as its ground truth. Error maps use a common scale for both models within each variable; the displayed case is selected by the aggregate-matched rule.
